Continuous Delivery

and its design

Yegor Bugayenko

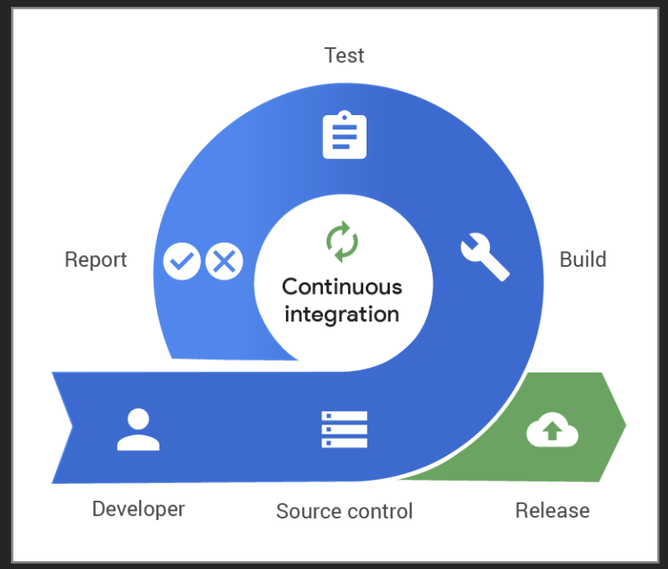
Lecture #10 out of 16
90 minutes

- Continuous Integration
- Continuous Delivery
- Open Source in GitHub
- Books, Venues, Call-to-Action

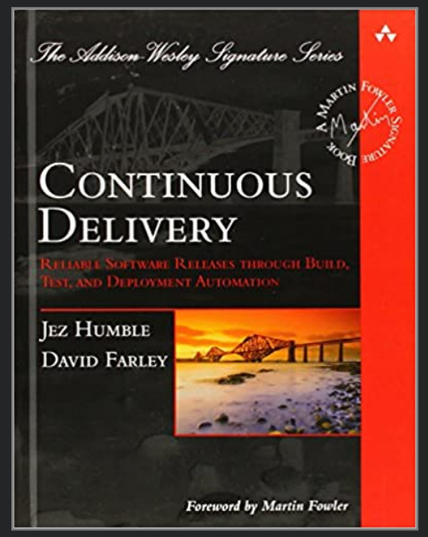
Chapter #1:

Continuous Integration

How Continuous Integration (CI) works:

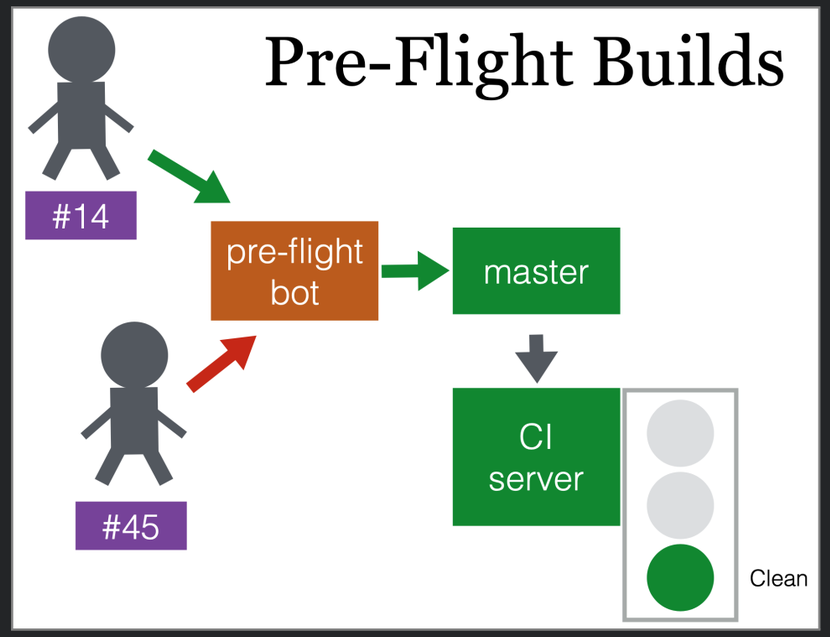


It doesn’t work :(



> “Crucially, if the build fails, the development team stops whatever they are doing and fixes the problem immediately”
>
> — Jez Humble, *Continuous Delivery*, p. 55

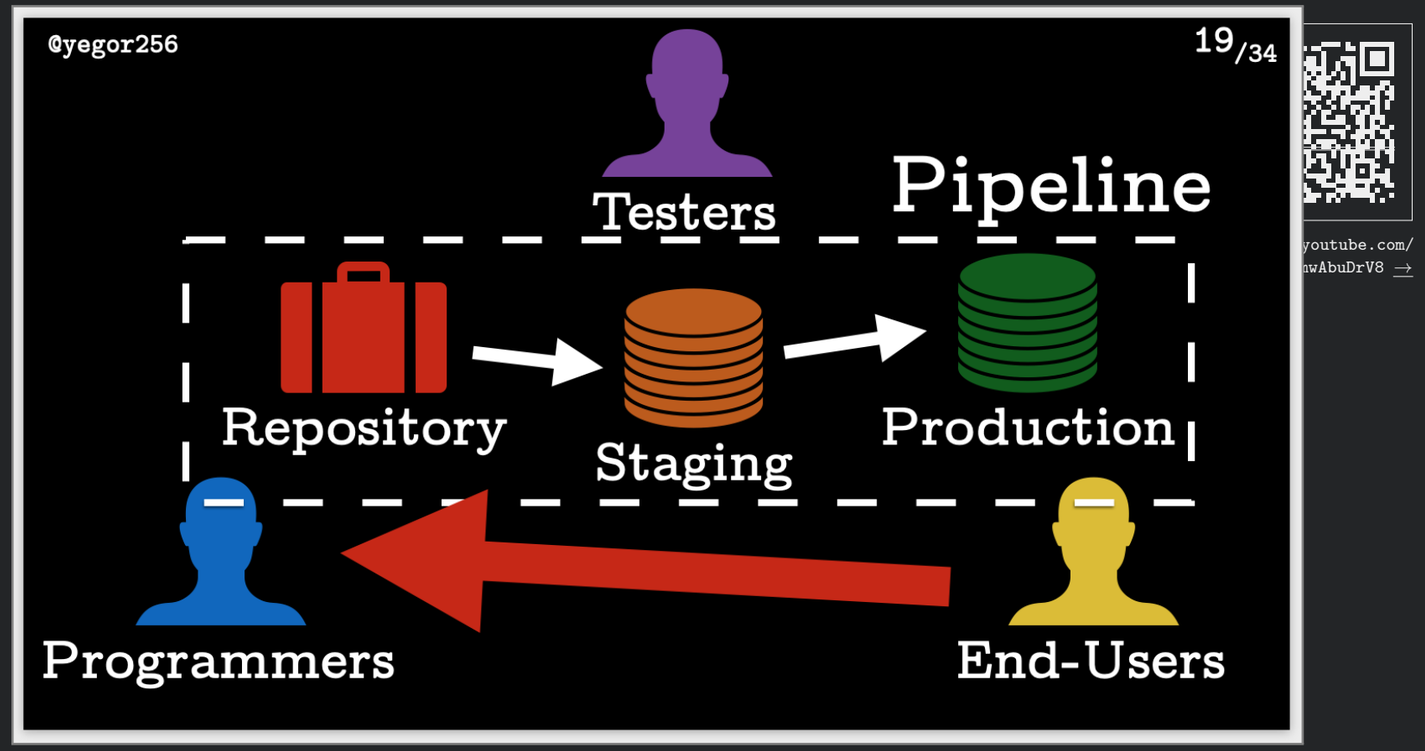
Pre-Flight Builds



Master branch is “read-only”!

Chapter #2:

Continuous Delivery



youtube.com/
wAbuDrV8 →

Joker Conf 2018, *Quality vs Quantity*, in Russian

“Each stage of a build pipeline is looking for reasons to reject the build. Tests failed? Reject it. Lint complains? Reject it. Build fails integration tests in staging? Reject it. Finished archive smells funny? Reject it.”

— Michael Nygard, *Release It!*

Quality Wall

- Linters
- Static analyzers
- Unit tests
- Integration tests
- Test coverage control
- Mutation coverage control
- Manual code review(s)

Target Platforms

Static web site: GitHub Pages

Library: Maven Central, RubyGems.org, Npm.org, etc.

Small web app: Heroku or Dokku

Bigger web app: AWS Elastic Beanstalk

Mobile app: TestFlight

Versioning

snapshot, alpha, beta, final

semver.org: 1.4.17

0ver.org: 0.43.3

CI/CD Tools

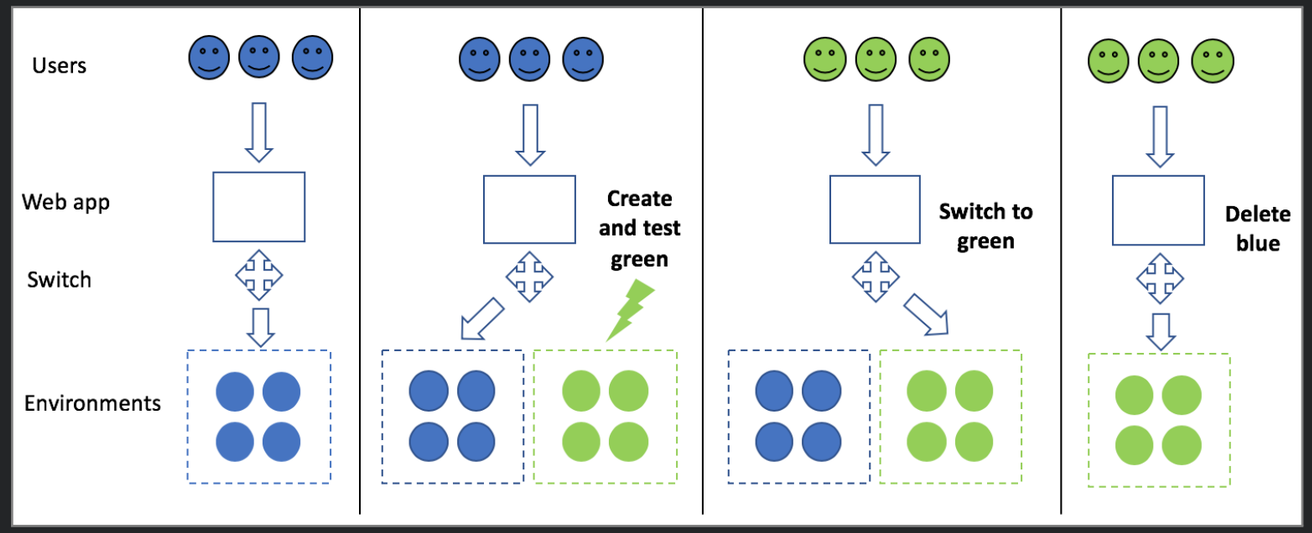
Jenkins

1000+ Hosted Services like Travis

GitHub Actions

Rultor.com

Blue/Green Deployment



May not work with databases :(

Chapter #3:

Open Source in GitHub

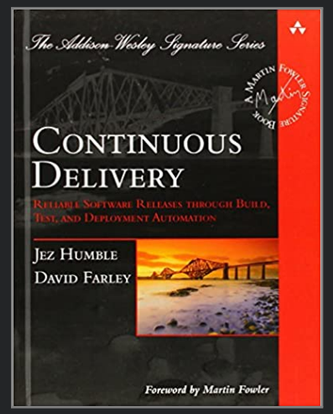
Chapter #4:

Books, Venues, Call-to-Action



“Continuous Delivery: Reliable Software Releases through Build, Test, and Deployment Automation” by Jez Humble et al.

“Release It!: Design and Deploy Production-Ready Software” by Michael T. Nygard

Where to go:

Collect 1000 stars on GitHub for your product.

Call to Action:

Setup continuous delivery pipeline in your application so that it is released to production automatically on each commit to `master` branch.

Still unresolved issues:

- How to parallelize tests?
- How to speed up merging into “master”?
- How to generate tests automatically?
- How to enforce quality for legacy code base?
