## XML

#### vs JSON, YAML, TOML, etc.

YEGOR BUGAYENKO

Lecture #7 out of 16 90 minutes

All visual and text materials presented in this slidedeck are either originally made by the author or taken from public Internet sources, such as website. Copyright belongs to their respected authors.

Extensible Markup Language (XML)

XSD, XPath, XSLT, XQuery, etc.

JavaScript Object Notation (JSON)

YAML, TOML, CSV

Books, Venues, Call-to-Action

3/22

Chapter #1:

Extensible Markup Language (XML)

[ XML Namespaces Escaping Formats ]

### Library in XML

[ XML Namespaces Escaping Formats ]

#### Namespaces

[ XML Namespaces Escaping Formats ]

## Escaping

[ XML Namespaces Escaping Formats ]

# Open Office XML, XMPP, SyncML, RDF, XMI, XMIR:)

https://en.wikipedia.or g/wiki/Category:XML-bas ed\_standards  $\rightarrow$ 

8/22

Chapter #2:

XSD, XPath, XSLT, XQuery, etc.

XML XSD JSON Others B.V.C. [XSD XPath XSL]

## XML Schema Definition (XSD)

```
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType name="book">
    <xs:sequence>
      <xs:element name="author" minOccurs="1" maxOccurs="1"/>
      <xs:element name="title" minOccurs="1" maxOccurs="1"/>
    </xs:sequence>
    <xs:attribute name="id" type="xs:decimal"/>
  </xs:complexType>
  <xs:element name="library">
    <xs:complexType>
      <xs:sequence>
        <xs:element name="book" type="book" minOccurs="0"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
</xs:schema>
```

```
XML XSD JSON Others B.V.C. [XSD XPath XSL]
```

## XML Path Language (XPath)

```
library><book id=42><author>David West</..></..></..>
```

/library/book[@id='42']

//book[@id='42']

//book[first()]

//book[author='David West']

//book[author[text()='David West']]

XML XSD JSON Others B.V.C. [XSD XPath XSL]

## XSL Transformations (XSLT)

```
<?xml version="1.0"?>
<xsl:stylesheet version="2.0"</pre>
  xmlns:xsl="http://www.w3.org/1999/XSL/Transform" >
  <xsl:template match="book">
    <item>
      <xsl:value-of select="title"/>
      <xsl:text> by </xsl:text>
      <xsl:value-of select="title"/>
    </item>
  </xsl:template>
  <xsl:template match="node()|@*">
    <xsl:copy>
      <xsl:apply-templates select="node()|@*"/>
    </xsl:copy>
  </xsl:template>
</xsl:stylesheet>
```

12/22

Chapter #3:

JavaScript Object Notation (JSON)

XML XSD <u>JSON</u> Others B.V.C.

## JSON for the Library

```
"id": 42,
    "author": "David West",
    "title": "Object Thinking"
},
{%
    "id": 43,
    "author": "Martin Fowler",
    "title": "Refactoring"
}
```

 $\begin{array}{c} \mathtt{https://www.yegor256.co} \\ \mathtt{m/2015/11/16/json-vs-xm} \\ \mathtt{l.html} \ \ \underline{\rightarrow} \end{array}$ 

XML XSD <u>JSON</u> Others B.V.C. [JSON]

#### JSON to JavaScript Object and Backwards

```
var a = JSON.parse('{"age": 25}').age;
```

JSON.stringify({age: 25});

15/22

Chapter #4:

YAML, TOML, CSV

## Yet Another Markup Language (YAML)

#### library:

- id: 42

author: David West

title: Object Thinking

- id: 43

author: Martin Fowler

title: Refactoring

[ YAML TOML CSV ]

#### TOML

```
[library.a]
  id = 42
  author = "David West"
  title = "Object Thinking"
[library.b]
  id = 43
  author = "Martin Fowler"
  title = "Refactoring"
```

XML XSD JSON Others B.V.C. [ YAML TOML CSV ]

Comma-Separated Values (CSV)

Id,Author,Title
42,David West,Object Thinking
43,"Martin Fowler","Refactoring"

 $\begin{array}{l} \texttt{https://en.wikipedia.or} \\ \texttt{g/wiki/List\_of\_file\_for} \\ \texttt{mats} \rightarrow \end{array}$ 

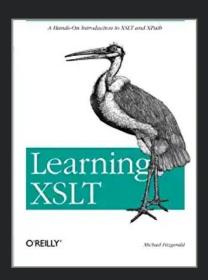

19/22

Chapter #5:

Books, Venues, Call-to-Action

"XML in a Nutshell, Third Edition" by Elliotte Rusty Harold et al.

"Learning XSLT: A Hands-On Introduction to XSLT and XPath" by Michael James Fitzgerald

#### Call to Action:

In your application, make sure your data is represented in XML, at least in one place, and being transformed by XSLT.

Design your own data format.

#### Still unresolved issues:

- How to map XML/JSON to objects?
- How to print object to XML/JSON?
- How to create a common binary format?
- How to restore the popularity of XSLT?
